                                                                                                 * NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

```
This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phred quality) - 30; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                         Kaul, R.K., Olson, M.V., Raymond, C., Clendenning, J., Ivey, R.G. and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence was finished as follows unless otherwise noted:
                                                                                                                                                                                                                                                                                                                                                                    Kaul, R.K., Olson, M.V., Zhou, Y., James, R.A., Raymond, C. and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Assembly program: Pirrap; version 0.990319

```
only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em. EMBL; Sw., SWISSPROT: TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
                           Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with
                                                                                                                                                                                                                                                                                                                                                   was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
                                                                                                                                                                                                                                                                                                                                                                                                         Group. Further information can be found at this heart ac.uk/HBCyChr9 This sequence is the entire insert of clone RP11-18B16 The true left end of clone RP11-53418 is at 158579 in this sequence. The true right end of clone RP11-168H1 is at 7374 in this sequence. The This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate
During sequence assembly data is compared from overlapping clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chemistry or covered by high quality data (i.e., phred quality) as ditempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RP11-18816 is from the library RPCT-11.1 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2672. 2890

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 was hydromanically sheared by repeated passage through a 0.005 inch oritice at constant velocity. The sheared DNA was hydromanically sheared by repeated passage through a 0.005 inch oritice at constant velocity. The sheared DNA was blunt ends and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified a size-selected for a 9.5 to 10.5 kb range using preparative agarose gal electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gilg732114gb]AP12972.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to chemically-competent E. coll XIIO-Gold (Stratagene) cells and selected for ampicillin resistance."

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymerase and T4 polymerase and T4 ignated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (dil4732114)[pb]ARL29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into capators competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

from poly mRNA using an oligo-dT primer containing a Xion site. Following second strand synthesis, EcoRI adapters were ligated to the CDNA and products were size-selected on Sephacryl S600. The CDNAS were ligated to EcoRI/XhoI prepared lambda ZAPII(Stratagene). Clones were converted to phagemids by mass excision using ExAssist helper phage and E.coli SOLR cells (Stratagene). Insert sizes range from 0.7-1.5Kb. The library may contain a small percentage of host or bacterial contaminants. Clones were selected by negative hybridization against a pool of over-represented ESTS (N>-10, from 1506 previous reads)."

polylinker; Site_1: Not 1: Site_2: ECO RI: The UI-R-DKO
library is a subtracted library derived from a mixture of
five individually tagged normalized rat libraries:
frue individually tagged normalized rat libraries:
frue individually tagged normalized rat libraries
frue of 20%, heart-RRPP (20%), and placenta-nRPP (20%), and placenta-nRPP (20%), and placenta-nRPP (20%), Each original
library was constructed from a mixture of equal amounts of
RNA from seven different developmental time-points:
embryonic day 17, embryonic day 19, embryonic day 21,
adult day 1, adult day 12, adult day 75, and adult day
adult day 1, adult day 12, adult day 75, and adult day
day 17 RNA and the placenta pool contains only the three
embryonic stages). Bach library was normalized
individually according to the procedure described by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          libraries of brain (CTOS), heart (CSOS), Kidney (CUOS), aorta (CWUS), and placenta (CXOS). The resulting pool of approximately 5,000 clones represented about 33.3% of the final driver population. A set of about 2,000 arrayed clones from each of the five normalized libraries of brain (CTO), heart (CSO), kidney (CUO), aorta (CWO), and (CTO), resulting pool of about 10,000 clones represented about 66.5% of the final driver population.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             library, plasmid DNA from each of the five individually tagged normalized libraries was mixed in the proportions specified above and electroporated into competent bacteria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   representing the pool of libraries. Single-stranded circular DNA representing the pool of libraries. Single-stranded circular DNA representing these five normalized libraries was then used as a tracer in a subtractive hybridization with a driver (PCK amplified inserts from a plasmid DNA template preparation) comprising: a) a set of about 1,000 arrayed clones from each of the five non-normalized
                                                                                                                                                                                                                                              Email: msoares@blue.weeg.ulowa.edu
Email: msoares@blue.weeg.ulowa.edu
the sequence contained an oilgo-dr
oilgonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
strand cDNA and therefore tag present in the cDNA between the NoLI site
and the oligo-dr track served to identify it as a clone from the
normalized rat kidney pool library cDNA Library Preparation: M.B.
Scares Lab Clone distribution: clones will be available through
Research Genetics (www.resgen.com)
Seq primer: Ml3 Forward

Oligo-driver found, Not I site shown in beginning of sequence oligo-drivers holf found, Not I site shown in beginning of sequence is likely internal to the message. cDNA Library Preparation: M.B. Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAS whose availability will be considered under appropriate and limited collaborative arrangements Seq primer: ML3 Forward

/clone_lib-cacolibradiii CC-1690, Lambda Zap II"
/clone_lib-cr. reinhardtii CC-1690, Lambda Zap II"
/note="Vector: pBluescript II SK-; Site_I: ECORI; Site_2:
Xhol; This library, constructed by John Davies and Jeffrey
MCDermott, combines CDNas from CC-1690 cells grown to
mid-log phase in TAP (acetate-containing) medium in the
light, TAP medium in the dark. HS (minimal) medium in
ambient levels of CO2 and HS medium bubbled with 5% CO2.
PolyA mRNA was purified from each sample, pooled and cDNA
synthesized. The CDNA was directionally cloned into lambda
ZAP II (Stratagene) in the ECORI (5') and XhoI (3') sites.
pBluescript II SK- plasmids were excised from the lambda
ZAP clones by superinfection with EXAssist (Stratagene)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BF418859

        The sequence contained an oligo-du track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A trail. The sequence tag present in the cDNA between the NoLI site and the oligo-dT track served to identify it as a clone from the normalized AV canal at 16.5 dpc library CDNA Library Preparation:

```
/note="Vector: pBluescript II SK+; Site_I: ECCRI; Site_2:
XhOI; The CDNA library was constructed from mRNA isolated
from the epicotyls of 2 week old seedling for the cultivar
Williams. The seedlings were germinated in a growth
chamber, excised above the soil level, and the plants
were placed in a 100 ppm solution of auxin for 24 hours
prior to harvesting. Complementary DNA was synthesized
from mRNA using a primer consisting of a poly(dT)
sequence with a XhoI restriction site. EccRI adapters
were ligated to the blunt-ended cDNA fragments followed
by XhoI digestion. The CDNA fragments were directionally
cloned into the EccRI-XhoI restriction site of the
pBluescript vector. The ligated cDNA fragments were
transformed into DH10B host cells (GibcoBRL). This
shoemaker.

/note="Vector: pT73D-Pac (Pharmacia) with a modified
polylinker; Site_1: Not I; Site_2: ECC RI; The
NIH BMAP MS 41 library is a subtracted library of a series,
ultimately derived from a mixture of individually tagged
normalized libraries from ten regions of the mouse brain
(cerebellum, brain stems, olfactory bulbs, hypothalamus,
cortex, amygdala, basal ganglia, pineal gland, striatum,
hipoceampus) after a series of subtractions to reduce the
representation of CoNAs from which ESTs had already been
generated. The following serially subtracted libraries
were generated in Libs process: NIH_BMAP_MS3.1,
NIH_BMAP_MS3.3, NIH_BMAP_MS3.2, NIH_BMAP_MS3.1,
NIH_BMAP_MS3.3, NIH_BMAP_MS3.2, and
NIH_BMAP_MS3.3, NIH_BMAP_MS3.3, NIH_BMAP_MS3.2, and
was used as a driver in a hybridization with a pool of
the NIH_BMAP_MS3.3, NIH_BMAP_MS3.2, and NIH_BMAP_MS3.1
libraries in the form of single-stranded circles (subtracted library)
was purified by hydroxyapatite column chematography,
converted to double-stranded circles (subtracted library)
while bmap_MS3.1 library. This procedure has been previously
described (Bonaldo, Lennon and Soares, Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Shoemaker, Keim, P., Vodkin, L., Erpelding, J., Coryell, V., Khanna, A., Bolla, B.; Marra, M., Hillier, L., Kucaba, T., Martin, J., Beck, C., Wylie, T., Underwood, K., Steptoe, M., Theising, B., Allen, M., Bowers, Y., Person, B., Swaller, T., Gibbons, M., Pape, D., Harvey, N., Schurk, R., Ritter, E., Kohn, S., Shin, T., Jackson, Y., Cardenas, M., McCann, R., Waterston, R. and Wilson, R.

The sequence tag present in the cDNA between the NoLI site and the oligo-dT track served to identify it as a clone from the normalized brown adipose library cDNA Library Preparation: M.B.
